LEAK DETECTION

Plug and Play Auto-connect

Robust, easy, positive connection every time.

Robust, easy, positive connection every time

Andel's tried and tested Floodline® multi-zone leak detection systems are well known for being the most reliable, effective and easy to use. The "Plug & Play Auto-Connect" system allows instant, fool-proof connection for quick, no-hassle installation by any engineer, contractor or competent person.

Using a special version of the industry-standard "RJ" type network connector, Floodline Plug & Play has universal acceptance. This robust, stable plug and socket system gives quick, easy, positive connection every time, and maintenance, replacement and modification couldn't be easier.

Cabling and lengths

8 Zone Detection Cable and patch-leader cables are available in a range of standard pre-terminated lengths. Other non-standard lengths can be supplied at no extra charge, and all cables can also be cut and connected on site by trained engineers.

The coupler system

In/out couplers perform all connection and zone-change functions — with no setup or links to change, no wire stripping and no confusion.

- **SOL (Start of Line)** — connects the leader cable to the detection cable.
- **AutoCoupler** — connects one detection cable zone to another; in-built system logic automatically sets its relative position and zone address.
- **EOL (End of Line)** — terminates the last zone in line.

Benefits at a glance

- Instant, fool-proof connection
- Hassle-free installation
- Universal acceptance
- Robust and stable

Floodline Plug & Play Auto-Coupler connectors for fool-proof, positive connection.

TECHNICAL INFORMATION

Standard lengths: 5m, 7.5m, 10m, 15m
